HIGH ALTITUDE CARBURETOR KITS/1978 1/2 AND 1979 MODELS

Carburetor modification kits are being made available for installation in 1200cc, 1340cc and 1000cc models to provide leaner fuel mixtures when operating at elevations over 4000 feet above sea level.

Normally, leaner fuel/air mixtures are required for proper engine operation as the elevation above sea level increases.

The following high altitude kits should be installed where there is evidence of over-richness causing loss of smooth combustion, "stumbling" when accelerating, or other driveability complaints at high altitudes. These kits are on order from the carburetor manufacturer and will be available to you about July 1.

Part No. 27094-78 for 1978½ FLH-1200
Part No. 27095-78 for 1978½ FX, FXE, FXS-1200
Part No. 27096-79 for 1979 XLH (XL), XLCH, XLCR-1000
Part No. 27093-78 for 1978 FLH-80 (1340cc)

An instruction sheet with complete information on kit parts and installing procedure is included with this bulletin.

Please note that the instruction sheet cautions that any motorcycle modified for high altitude operation must be converted back to standard if operated at altitudes below 4000 feet. Over-lean operation may cause engine damage.
