Digital Technician News

Digital Technician Phase 13 (current Version 13.10) will not detect if a 2005 EFI motorcycle has been tuned with a Screamin' Eagle Pro EFI Race Tuner kit.

Model years 2004 and earlier have the functionality to detect vehicles that have been EFI Race Tuned. This value displays in the Calibration & System Information screen in Digital Technician. Due to the late release of the 2005 EFI Race Tuner software, 2005 vehicles that have been Race Tuned will display a value of "NO" on this screen. However, you will be able to detect a Race Tuned vehicle by the calibration ID number.

Detection of 2005 EFI Race Tuned vehicles will be available in the next Digital Technician Phase 14 DVD software release, targeted for early December.

EFI Race Tuner News

If you are having trouble using the EFI Race Tuner part # 32107-01C (Version 4.1.0.) on service replacement ECM's (Part #32534-05) please call Technical Service for assistance.
