CVO Tour-Pak Interior Light Kits

Starting on April 18th, 2005 the CVO tour-pak interior light for the FLHTCSE² has been changed to the LED style light. The new part number is 54332-04. The operation of the light is different and these are the operating instructions:

1. To turn on the light, press and release the center of the clear Bar and Shield lens.

NOTE

If not pressed a second time to turn the light OFF, the light will automatically turn itself OFF after 5 minutes.

2. To turn off the light, press and release the center of the clear Bar and Shield lens.

NOTE

If the switch in the center of the clear lens is pressed in and held continuously (i.e. if the light is pressed against something inside a closed Tour-Pak), the light will automatically turn OFF after 30 seconds and disconnect itself from the power lead. To reset the light, separate and then re-connect the power connector.

There will be empty wire connectors on the light harness in the tour-pak. These are the connectors you would use if the customer wants to add the saddlebag lights, part number 54333-04. More detailed instructions for this kit can be found on the instruction sheet which may be found on h-dnet.

If you have a warranty situation with the previous light please use this new LED light as the replacement. The pictures below show the new light and the wire routing.
