### Buell Translucent Air Box Cover Hardware

This is to inform you of a running change in the hardware for 2005 and 2006 model year Buell XB9SX and XB12S and XB12Scg models with translucent air box covers. The new part numbers for the hardware are CO188.3AA (top hat bushing), CB0016.3AA (isolating washers). The hardware will help isolate the air box cover from the stress of clamping the part to the frame and reduce the chance of environmental stress cracking when exposed to spilled fuel. Each of the front mounting holes of the translucent air box covers will get a top hat bushing and two isolating washers. The brim or flat area will be installed against the frame with one isolating washer on the inside of the air box cover and one isolating washer on the outside. Torque the fastener to 12-36 in lbs. If you order a replacement cover it will come with the necessary hardware and an instruction sheet for installation, any vehicles built after 11/23/05 with translucent air box covers will have these parts installed at the factory.
