

TT279 – December 4, 2006

2007 FX Softail 200mm Rear Tires

On 11/16/06 we started using the D205 rear tire on the FXST, FXSTC & FXSTB model Softails in production due to supply issues. As of 11/28/06 the FXSTSSE Softail will also use this tire. Both are 200/55R17 tires, the most obvious difference is the tread pattern. If you notice one of these tires on these models please be aware that this is the normal production tire until the D407 is more readily available. **Do Not** file a PRD claim for changing the tire. If you do not have any D407 tires left in inventory you may use the D205 as a replacement tire on these models.

D205

D407

NOTE: The 2007 FLSTF Model will continue to be built with the D407 tire. You can install the D205 tire on this model as a substitute for the D407 if desired.
