

TT295 – March 5, 2007

Screamin' Eagle Pro EFI Race Tuner Software

There is a new software CD available, it is part # 32117-01J.

New Features:

- Tuning Mode 4.6.2. adds new calibrations for 2007 HDI vehicles and Active Intake and Exhaust functions for HDI vehicles that support this feature.
- All 2007 model year 'Big Twin' calibrations have been updated to allow using the 'Automatic Compression Release' (ACR) function.
- Refer to the pull down HELP in Tuning Mode for further information. (pictured below)

NOTE: This screen will only appear after you click "Program ECM" and it is applicable to the calibration you are installing.

The screenshot shows a web browser window titled "Tuning Mode EFI Tuner On-line Help". The left sidebar contains a table of contents with "Active Control Functions" selected. The main content area is titled "Active Control Functions" and contains the following text:

When programming is first started the ECM is checked for compatibility with the following "Active Control" functions:

- Active Intake
- Active Exhaust
- Automatic Compression Release

If both the vehicle *and* calibration have any of these features available, a form will be presented which allows the user to change the settings for these functions. Note that not all features may be available for a given application. Unavailable features will be grayed out and cannot be changed.

The "Active Tuning Options" form is displayed in the center. It has a blue header and contains the following sections:

- Assign Active Tuning Options**
Grayed-out selections are not available for this model.
- Active Intake System Settings**
 Enable Active Intake
 Disable Active Intake
- Active Exhaust System Settings**
 Enable Active Exhaust
 Disable Active Exhaust
- ACR Solenoid Settings**
 Enable ACR
 Disable ACR

A "Save and Program" button is located at the bottom of the form.
